

## CUSTOM LAWN

A comprehensive fertility and bionutrient program that promotes controlled growth, increases nutrient uptake, and ensures predictable nutrient availability by unlocking tied-up nutrients that already exist in the soil and turning them into plant usable nutrition. Provides stronger defense against drought, heat, and disease pressure. Apply this program at each round for healthier, stronger turfgrass and long-lasting color.

### **Foliar-Pak® Microsync** | 1 - 3 oz per 1,000 sq ft

Foliar-Pak Microsync is a well-balanced micronutrient package built with amino acids to enhance health, color, and stress tolerance in any turfgrass species. Premium nutrient chelators improve uptake efficiency and compatibility with broadleaf herbicides: iron and manganese support chlorophyll production and photosynthesis; zinc plays important roles in root initiation and antioxidant production; copper and manganese work as enzyme activators in the process of building proteins; boron is crucial for cell wall development by providing structural linkages in cell walls; amino acids enhance the plant's ability to tolerate environmental stress, disease, and insect pressures.

### **Foliar-Pak® Armament® Concentrate** | 10 - 16 oz per A

Foliar-Pak Armament Concentrate keeps nutrients in solution, preventing interactions in the spray tank and improving nutrient availability.

Armament technology is a patented, biodegradable nutrient enhancer. This high-molecular weight structure holds a large population of negative charges. These negative charges gently complex positively charged metals, keeping them in solution.

*Also Add:*

### **Stabilized Urea** | 0.5 - 0.75 lb Nitrogen per 1,000 sq ft

Adding your choice of stabilized urea will allow the turfgrass to use a greater majority of nitrogen instead of it being lost to leaching, volatility, or denitrification. It will increase turf health through the season and makes it easier to keep up with mowing.
