

# BioDrive

*Humic Acid Supplement*

Foliar-Pak® BioDrive is a highly active humic acid source that improves soil chemistry and soil microbial activity.

## PRODUCT DESCRIPTION/BENEFITS

Foliar-Pak BioDrive is a highly active humic acid source. Using a proprietary extraction process the integrity of natural humic and fulvic structures are preserved, thus eliciting better plant and soil responses.

- Humic and fulvic acids make soil nutrients more available by naturally complexing and chelating nutrients and making them more available for root uptake.
- Foliar-Pak BioDrive provides energy to microbes which work to mineralize nutrients increasing their availability.
- Foliar-Pak BioDrive aids heavy soils by reducing flocculation of clay particles that tie up sodium, thus improving overall soil structure, root penetration, oxygen availability and water availability.
- Foliar-Pak BioDrive assists sandy soils by increasing CEC, improving environment for microbial activity, and helping with soil water relations.
- Humic acids and enzymes present in BioDrive enhance rooting and root uptake performance.

## GUARANTEED ANALYSIS

Humic Acid ..... 4.0%

Derived from: Leonardite

## PRODUCT INFORMATION:

Weight per Gallon: 8.8 lbs (4.0 kg)  
pH: 9.3

foliar

soil

## GENERAL USE GUIDE

May be applied with other nutrients. Due to variability in water sources and pesticide formulations a compatibility test is recommended.

### Soil Applications for Turfgrass

Apply 3.0 to 9.0 fl oz per 1,000 sq ft every 14 to 28 days. Tank mix with other soil applied nutrients. For most effective results, water into soil profile as soon as possible.

### Foliar Applications with Micronutrients

Apply 1 to 2 pints per acre with foliar sprays to improve membrane permability of plant leaves and improve nutrient uptake.

### Tank Mix Combinations

Apply 1 to 2 pints per acre with herbicides, fungicides, and fertilizers in tank mix combinations for improved plant uptake and utilization.
