GENERAL USE GUIDE

F1502

Use to expedite the grow-in and establishment process for any turfgrass stand, to maintain turf vigor, or to aid in recovery when turf has been subjected to extreme stress and traffic. This product is tank mix compatible with most fertilizers and pesticides. However, due to variability in water sources and pesticide formulations a compatibility test is recommended. Shake well.

Sports Turf Lawns	Turfgrass Grow-In: Apply 9.0 to 12.0 fl oz per 1,000 ft sq in enough water to provide sufficient foliar coverage. Apply every 7 to 14 days. Higher rates can be used when soil nutrients are limited by reduced granular application. Can be tank mixed with other nutrients, control products or growth regulators. Maintenance: Apply 6.0 to 15.0 fl oz per 1,000 ft sq. Programs supplying limited granular inputs require higher rates. Apply every 14 to 28 days.
Hydro-Mulch Seeding	Mix 9.0 to 12.0 fl oz into seeding tank with appropriate volume of water to treat 1,000 ft sq.
Trees and Ornamentals	Use 2 gal Foliar-Pak Grow-In per 100 gallons of water. Bedding Plants and Hanging Baskets: Drench 1 gal of finished solution per 20 sq ft of planted area (do not treat the general bed space). Treat each annual plant as if it covers 1 sq ft. For optimum results, fertilize every 2 weeks. Shrubs and Trees: Drench 1 gal of finished solution per 1" diameter of tree or shrub. In areas where turf is present, inject the solution into the soil.

In Virginia, this lawn fertilizer, which contains phosphorous, is intended only for nonagricultural use on (i) turf during its first growing season, (ii) turf areas being repaired or renovated, and (iii) turf where a soil test performed within the last 3 years indicates a phosphorous deficiency. This fertilizer is not intended for the routine maintenance of turf.
