

Manganese

3-0-0

Foliar-Pak® Manganese with AminoPrecise® uses specific amino acids to fully chelate the manganese ion, which allows for maximum foliar entry into the plant.

PRODUCT DESCRIPTION/BENEFITS

Foliar-Pak Manganese with AminoPrecise is a newly formulated fertilizer that increases manganese content in plants by offering the following advantages:

- Protected by a 2:1 ratio of amino acids to manganese, the manganese is fully chelated by amino acids.
- Complete chelation of the manganese ion maximizes the solubility of the complex, and the protection given to manganese, which increases foliar entry into the plants, while also ensuring a more efficient movement through the vascular system.
- The amino acids used help the plant build better energy through increased photosynthesis, nitrogen fixation, and anti-stress molecule production. In addition to this, in warm season plants, the amino acids aid in carbon fixation.

Acting in concert with amino acids, manganese is a component of a few different enzymes—one of which helps protect mitochondria from tissue-damaging oxygen-radicals. There is also a manganese-protein complex found in the thylakoid membranes that assist in the splitting of water molecules. Aside from these, manganese is mostly used as an activator of enzymes such as dehydrogenases, transferases, hydroxylases, and decarboxylases. Many of these enzymes are involved in carbon and nitrogen metabolism, and also play a role in secondary metabolite production such as phenolics, cyanogenic glycosides, and lignin plant defense compounds—which are all important for plant defense systems.

GENERAL USE GUIDE

Used to increase the manganese content in plants and soil where manganese deficiencies are present. This product is tank mix compatible with most fertilizers and pesticides. However, due to variability in water sources and pesticide formulations, a compatibility test is recommended.

**Golf Course Greens,
Tees, and Fairways**
Sports Turf
Lawns

Apply 0.25 to 1.5 fl oz per 1,000 sq ft in enough water to provide sufficient foliar coverage.
Repeat application every 7 to 21 days or as determined by tissue tests.

GUARANTEED ANALYSIS

Total Nitrogen (N)	3.0%
3.0% Water Soluble Nitrogen	
Manganese (Mn)	6.0%
6.0% Water Soluble Manganese (Mn)	

Derived from: soy protein hydrolysate, manganous oxide

AMINOPRECISE®

AminoPrecise is a formulation technology used to create Foliar-Pak's new amino-acid products. Using specific amino acids in chemical reactions with each individual nutrient maximizes the protection, solubility, entry into the plant, and movement through the plant's vascular system for each different nutrient-amino-acid compound. AminoPrecise products pair nicely with the Soil Solver® program when specific nutrients are found to be deficient in the soil solution.

PRODUCT INFORMATION:

Weight Per Gallon: 10.3 lbs (4.7 kg)
pH: 4.5
