

CUSTOM LAWN

This is a comprehensive fertility and bionutrient program that promotes controlled growth, increases nutrient uptake, and ensures predictable nutrient availability by unlocking tied-up nutrients that already exist in the soil and turning them into plant usable nutrition. It also provides stronger defense against drought, heat, and disease pressure. Apply this program at each round for healthier, stronger turfgrass and long-lasting color.

Foliar-Pak® Microsync | 1 - 3 oz per 1,000 sq ft

Microsync is a well-balanced micronutrient package built with amino acids to enhance health, color, and stress tolerance in any turfgrass species. The premium nutrient chelators in Microsync improve uptake efficiency and compatibility with broadleaf herbicides. Iron and manganese in Microsync support chlorophyll production and photosynthesis, while the zinc plays important roles in root initiation and antioxidant production. The copper and manganese in Microsync work as enzyme activators in the process of building proteins and the boron is crucial for cell wall development because it provides structural linkages in cell walls.

Foliar-Pak® Armament® Concentrate | 10 - 16 oz per A

Armament Concentrate contains Armament technology, our patented, biodegradable nutrient enhancer. Armament technology keeps nutrients in solution, preventing interactions in the spray tank and improving nutrient availability.

Stabilized Urea | 0.5 - 0.75 lb per 1,000 sq ft

Adding your choice of stabilized urea will allow the turfgrass to use a greater majority of nitrogen instead of it being lost to leaching, volatility, or denitrification. It will increase turf health through the season and make it easier to keep up with mowing.
