

## FALL FOLIAR (Cool Season)

As daylight hours decrease, turfgrass naturally undergoes a process called hardening off. It's the plant's way to build a tolerance to cold temperatures and defend against winter damage. An essential part of hardening off is the process of storing carbohydrates in cells of the crown and root tissues, increasing cell solute concentration, accumulating proteins and strengthening cell wall structures. Apply the Foliar-Pak Fall Foliar Program to dramatically improve these processes.

### **Foliar-Pak® Foundation Forty** | 1 oz per 1,000 sq ft

Foundation Forty is a highly concentrated blend of specific amino acids that increases plant energy, builds proteins, and improves carbohydrate storage. It also improves plant metabolism, especially photosynthesis, and enhances the uptake of other nutrients and spray tank additions.

### **Foliar-Pak® 1-0-15** | 3 - 6 oz per 1,000 sq ft

1-0-15 is made up of safe, reliable nutrients enhanced with a plant-derived L-amino acid package. It works to increase nutrient absorption and maximize plant nutrition through the use of low-dose applications. These L-amino acids work in various pathways to increase nutrient uptake and nutrient transport.

### **Foliar-Pak® Amperage** | 3 oz per 1,000 sq ft

Sugars from natural molasses in Amperage energize plants and microbes with available carbon sources that stimulate biological activity. Amperage also provides an excellent color response and aids in thatch reduction.

### **Foliar-Pak® CSi L** | 1 - 2 oz per 1,000 sq ft

CSi L is one of the most concentrated liquid silicon products in the market at 25% SiO<sub>2</sub> by weight. It is derived from silicic acid, and forms a low molecular weight silica polymer.

### *Optional Addition:*

### **Foliar-Pak® Calcium** | 2 - 3 oz per 1,000 sq ft

Calcium was formulated using three natural and modified plant metabolites specific for protecting calcium.
