

SOIL (Cool Season)

When planning for fall fertility, focus on calcium, phosphorus, potassium, and roots. In the fall, as the temperature begins to drop, cool-season grasses activate a second root growth flush, growing rapidly until temperatures turn cold and growth slows down. The Foliar-Pak Cool Season Soil Program is perfect for addressing turf's calcium, phosphorus, and potassium needs during this important period of root growth.

Foliar-Pak® Armament® P | 3 oz per 1,000 sq ft

Phosphorus is essential for protein synthesis, cell division, and the development of new tissue. Armament P increases phosphorus availability by preventing common soil nutrient interactions that tie up phosphorus.

Foliar-Pak® Armament® K | 3 oz per 1,000 sq ft

Potassium controls the translocation of carbohydrates and plant osmotic relations and is integral to protein synthesis. Armament K is formulated with long-chain carbon technology specifically designed to deliver potassium to plant roots.

Foliar-Pak® Colonise® Bio | 3 oz per 1,000 sq ft

Colonise Bio is a highly specific blend of live biology, carbon sources, and nutrient enhancers. It contains Armament, AminoPrecise®, and Colonise technologies to target better rooting, nutrient uptake, plant resilience, and turf playability.

Foliar-Pak® Base Calcium | 3 - 6 oz per 1,000 sq ft

Base Calcium delivers calcium and nitrate to the soil. It is formulated using three natural and modified plant metabolites specific to increasing calcium availability.
