

# SPRING TRANSITION

Building carbohydrates and limiting excess growth is crucial for bermuda and zoysia during early spring. This program provides essential nutrients as well as sugars, amino acids and biostimulants that help to transition warm season turf from cold to warm weather.

**Foliar-Pak® Amperage 5-0-0** Sugars from natural molasses energize plants and microbes with available carbon sources that stimulate biological activity. Provides an excellent color response and increases carbohydrate storage in warm season turf.

**Rate:**  
3-6 oz  
per 1000 sq ft

**Foliar-Pak® Micros Plus** Improves lateral growth of stolons, rhizomes and enhances foliar recovery. Micros Plus improves cell division, nutrient use, photosynthetic properties and helps maintain healthy green color.

**Rate:**  
3 oz  
per 1000 sq ft

**Foliar-Pak® Calcium** Formulated using three natural and modified plant metabolites specific for protecting calcium. With limited root uptake during early spring, Foliar Pak Calcium is an important supplement for optimal spring performance.

**Rate:**  
1.5 oz  
per 1000 sq ft

**Foliar-Pak® Foundation Forty** A highly concentrated blend of specific amino acids to increase plant energy, build proteins and improve carbohydrate storage. Improves plant metabolism, especially photosynthesis, and enhances the uptake of other nutrients and spray tank additions.

**Rate:**  
3 oz  
per 1000 sq ft
