

## TRIPLE REPLENISH

Flushing the soil does a great job of removing the “bad actors,” but it can remove desired nutrients as well, specifically base cations. It’s important to come in after a flush with a replenishment program. Sodium (Na) often comes from irrigated sources. As such, it’s important to get open CEC sites filled with desirable base cations before the risk of sodium, from watering, could reclaim those open cation exchange sites. The Foliar-Pak Triple Replenish Program is a simple and easy to remember program to implement for soil replenishment.

### **Foliar-Pak® Armament® K** | 3 oz per 1,000 sq ft

Potassium controls the translocation of carbohydrates and plant osmotic relations and is integral to protein synthesis. Armament K is formulated with long-chain carbon technology specifically designed to deliver potassium to plant roots.

### **Foliar-Pak® Base Calcium** | 3 - 6 oz per 1,000 sq ft

Base Calcium delivers calcium and nitrate to the soil. It is formulated using three natural and modified plant metabolites specific to increasing calcium availability.

### **Foliar-Pak® Colonise® Bio** | 3 oz per 1,000 sq ft

Colonise Bio is a highly specific blend of live biology, carbon sources, and nutrient enhancers. It contains Armament, AminoPrecise®, and Colonise technologies to target better rooting, nutrient uptake, plant resilience, and turf playability.
