

Armament[®] KCS

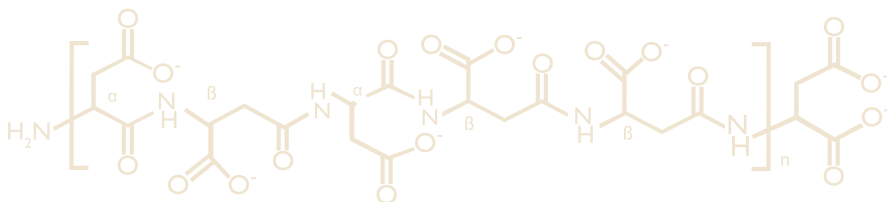

0-0-21

PRODUCT DESCRIPTION/BENEFITS

Armament KCS is a patent-pending fertilizer enhanced with a fully biodegradable, proprietary anionic amino acid polymer. Armament KCS features uniquely low application rates.

- Armament KCS's proprietary and uniquely engineered amino-acid polymer was created specifically to be effective in increasing the solubility of calcium sources, and of other tied-up nutrients within the soil by creating soluble complexes with them via amino-acid carboxylic acid groups.
- Armament technology is long lasting in the soil, with the polymer lasting up to 4 months in many soil types. This allows for longer-lasting uptake efficiencies for calcium and other nutrients, which helps to increase green-up response.
- With an extremely high density of negative charges, the Armament technology is an efficient molecule that is designed to work at lower use rates in the soil. Where older technologies (such as humic acid) need to be applied in very high amounts to be effective, the Armament technology provides benefits at low rates.

GENERAL USE GUIDE

Armament KCS is a patent pending fertilizer that has been treated with Armament. Use when soil tests suggest low nutrient levels or an imbalance of cations in the soil.

Maintenance

Apply 4 to 5 lbs per 1000 sq ft, or 176 to 220 lbs per acre (2-2.5 kg/100 M, or 200-250 kg/Ha) as needed to address calcium and potassium needs. Water in thoroughly after application for best results. Reapply as directed by soil tests.

One bag covers 9,000-11,000 sq ft or 836-1021 100/M.

GUARANTEED ANALYSIS

Soluble Potash (K ₂ O).....	21.0%
Calcium (Ca).....	10.0%
Sulfur (S).....	7.0%
7% Combined Sulfur (S)	
Magnesium (Mg).....	4.0%
Derived from: calcium sulfate, sulfate of potash, magnesium oxide	

NON PLANT FOOD INGREDIENTS

Copoly-[(3 carboxypropionamide) (2-(carboxymethyl) acetamide)].....	1.0%
---	------

PRODUCT INFORMATION:

SGN: 90

Packaging: 50 lb bag (22.68 kg)

Spreader settings can be
found on packaging
