

CSi L

2-0-0 with 25% Si

Foliar-Pak® CSi L is one of the most concentrated liquid silicon products in the market at 25% SiO₂ by weight.

PRODUCT DESCRIPTION/BENEFITS

Foliar-Pak CSi L is one of the most concentrated liquid silicon products in the market at 25% SiO₂ by weight. It is derived from silicic acid, and forms a low molecular weight silica polymer.

- Foliar-Pak CSi L is paired with a specific amino acid that acts as an osmolyte in the plant—which helps keep water in the cell, creating optimal turgor pressure and rigidity in the turf.
- Unlike other silicon products on the market, Foliar-Pak CSi L is tank-mix compatible with a variety of other products as it is built to not interact with other molecules in the spray tank.
- Owing to its small molecular weight and size, Foliar-Pak CSi L moves through the foliage very easily, unlike other silicon products such as silicates and slags that are not soluble, and therefore are not readily available for plant uptake and use.
- Silicon delivered from Foliar-Pak CSi L will increase plant turgidity, resulting in more upright growth, smoother surfaces, better green speed and better wear tolerance.

GUARANTEED ANALYSIS

Total Nitrogen (N) 2.0%
 2.0% Water Soluble Nitrogen
 Derived from: soy protein hydrolysate

NON-PLANT FOOD INGREDIENTS

Silicon Dioxide (SiO₂) 25.0%
 Derived from: colloidal silica

GENERAL USE GUIDE

This product is tank mix compatible with most fertilizers and pesticides. However, due to variability in water sources and pesticide formulations a compatibility test is recommended.

**Golf Course Greens,
Tees and Fairways
Athletic Fields**

Apply 0.5 to 2.0 fl oz per 1000 sq ft in enough water to provide sufficient foliar coverage.
 Repeat application every 7 to 21 days.
 Warm season turf may require more frequent applications.
