

ATHLETIC FIELD (Warm Season)

Take the guesswork out of your athletic field fertility program! From recovery and establishment of damaged areas to maintenance of well-established fields, this program provides a comprehensive set of solutions for your athletic field needs. It will cover you with a positive plant metabolic response, feed a complete set of essential nutrients, buffer the soil from undesirable components, unlock your soil's potential, and provide recovery from intense play. Moreover, it does all this with the simplicity and convenience of a two-product program, making it easy to use.

Foliar-Pak® Foundation Forty | 1 - 2 oz per 1,000 sq ft

Foundation Forty is a highly concentrated blend of specific amino acids that increases plant energy, builds proteins, and improves carbohydrate storage. It also improves plant metabolism, especially photosynthesis, and enhances the uptake of other nutrients and spray tank additions.

Foliar-Pak® Grow-In | 9 - 12 oz per 1,000 sq ft

Grow-In takes the guesswork out of building a program for turfgrass establishment. It combines the foliar nutrients most necessary for rapid turfgrass establishment into one jug.

Optional Addition:

Foliar-Pak® 18-3-4 | 3 - 6 oz per 1,000 sq ft

18-3-4 is made up of safe, reliable nutrients enhanced with a plant-derived L-amino acid package specific to increasing nitrogen fixation, chlorophyll and energy production. The L-amino nitrogen in 18-3-4 increases nutrient absorption and maximizes plant nutrition through the use of low-dose applications. L-amino acids work in various pathways to increase nutrient uptake and nutrient transport.
